## Tips on Navigating the Codebook

This document is a detailed codebook that describes each variable in the Medicare Encounter Records file. Because the files have such a large number of variables, we have included several ways for analysts to quickly find the information they need.

- A complete listing of all variables in the files, in alphabetical order based on their SAS variable names.
- Individual entries for each variable that contain a short description of the variable, the possible values for the variable, and, in many cases, notes that discuss how the variable was constructed and should be used.

We have included hyperlinks throughout the codebook to make it easier for analysts to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents will take you to the detailed description for that variable.
- From the detailed description for any individual variable, clicking on the 'Back to TOC' link after each variable description will take you back to the Table of Contents.

This section of the Codebook contains one entry for each variable in the Encounter Records file. Each entry contains variable details to facilitate understanding and use of the variables.

#### **ADMTG DGNS CD**

LABEL: Claim Admitting Diagnosis Code

**DESCRIPTION:** A diagnosis code on the institutional encounter indicating the beneficiary's initial diagnosis at

admission.

This diagnosis code may not be confirmed after the patient is evaluated; it may be different than the

eventual diagnoses (e.g., as in PRNCPAL\_DGNS\_CD or ICD\_DGNS\_CD1-25).

#### CLM\_CHRT\_RVW\_SW

LABEL: Claim Chart Review Switch

**DESCRIPTION:** This variable is used to indicate whether the encounter record is a chart review record. Chart reviews

are a type of encounter data record that allow Medicare Advantage Organizations (MAOs) to add or remove diagnoses that they identified through medical record reviews that were not initially reported

on encounter data records.

SHORT NAME: CLM CHRT RVW SW

LONG NAME: CLM\_CHRT\_RVW\_SW

**VALUES:** Y = Record is a chart review

Null/missing = Record is not a chart review

**COMMENT:** This is an indicator value that is set to 'Y' when MAOs report diagnoses obtained from medical record

reviews (i.e., chart reviews) that were not initially reported on encounter data records when the MAO

submitted the encounter. Otherwise, the value is set to null.

Chart review records may be submitted for any service type (including services that are not eligible for

risk adjustment), and there are no limitations on the number of chart review records in totality or per

encounter.

Additional details regarding the meaning and use of chart review records can be found in the

Medicare Encounter Data User Guide.

#### CLM\_CNTL\_NUM

LABEL: Claim Control Number

**DESCRIPTION:** The claim control number is an identifier assigned by the processing system (i.e., the Encounter Data

System Contractor) to a claim.

This is the field that, in combination with the original claim control number, identifies a unique version

of a service record.

SHORT NAME: CLM\_CNTL\_NUM

person) are present in the Encounter RIFs; records are not limited to the final version of the encounter record. When multiple records for a service exist, the higher the claim control number, the later it was

adjusted (i.e., the highest CLM CNTL NUM is the latest version of the encounter).

**DESCRIPTION:** The present on admission (POA) indicator code associated with the diagnosis E codes (principal and

secondary; fields ICD\_DGNS\_E\_CD1-ICD\_DGNS\_E\_CD10).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. #### **COMMENT:** This field, in combination with the service classification type code (variable called

CLM\_SRVC\_CLSFCTN\_TYPE\_CD) indicates the "type of bill" for an institutional claim. Many different types of services can be billed on a Part A or Part B institutional claim, and knowing the type of bill helps to distinguish them.

The type of bill is the concatenation of two variables:

```
—facility type (CLM FAC TYPE CD)
```

—service classification type (CLM\_SRVC\_CLSFCTN\_TYPE\_CD).

Note that sometimes 3 variables are used for "type of bill", where the 3<sup>rd</sup> digit is the claim frequency code (CLM FREQ CD).

### **CLM FINL ACTN IND**

LABEL: Claim Final Action Indicator

**DESCRIPTION:** This field is stored in the CMS Integrated Data Repository (IDR) as the final action indicator; however,

CMS has verified that for 2015 encounter records, this field should not be used to identify the final version of the record. Note that the term "final action" is used differently in encounter data,

compared to fee-for-service (FFS) claims.

**COMMENT:** Duplicate services across multiple final action records may exist, and users should make appropriate

adjustments when identifying distinct services. Additional information regarding identification of distinct services – or identification of populations appears in the Medicare Encounter Data User Guide.

Final action records are only indicative of the latest accepted record within a claim family that has been linked by the Medicare Advantage Organization (MAO) and may not be indicative of risk-

adjustment eligibility.

	•	P =	Adjustment required by QIO	

**COMMENT:** This code is used for encounter final action processing for all encounter claim types, including carrier.

The encounter bill type frequency codes utilize a similar nomenclature to Medicare fee for service bill type frequency codes. This field can be used in determining the "type of bill" for an institutional claim. Often the type of bill consists of a combination of two variables: the facility type code (variable called CLM\_FAC\_TYPE\_CD) and the service classification type code (CLM\_SRVC\_CLSFCTN\_TYPE\_CD).

This variable serves as the optional third component of bill type. Many different types of services can be appear on an encounter institutional claim, and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of three variables: the facility type (CLM\_FAC\_TYPE\_CD), the service classification type code (CLM\_SRVC\_CLSFCTN\_TYPE\_CD), and the claim frequency code (CLM\_FREQ\_CD).

A 3-part type of bill is the concatenation of three variables:

- —facility type (CLM\_FAC\_TYPE\_CD)
- —service classification type (CLM\_SRVC\_CLSFCTN\_TYPE\_CD)
- —claim frequency code (CLM FREQ CD).

**COMMENT:** The "from" date on the claim may not always represent the first date of services, particularly for Home

Health care. To obtain the date corresponding with the onset of services (or admission date) use the

admission date from the claim (variable called CLM ADMSN DT for IP, SNF and HH.

For Part B Non-institutional (Carrier and DME) services, this variable corresponds with the earliest of any of the line-item level dates (i.e., in the Line File, it is the first CLM\_FROM\_DT for any line on the claim). It is almost always the same as the CLM\_THRU\_DT; exception is for DME claims — where some

services are billed in advance.

#### **COMMENT:**

This field, in combination with the facility type code (variable called CLM\_FAC\_TYPE\_CD) indicates the "type of bill" for an institutional claim. Many different types of services can appear on an institutional encounter record, and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of two variables: the facility type (CLM\_FAC\_TYPE\_CD) and the service classification type code (CLM\_SRVC\_CLSFCTN\_TYPE\_CD).

**SOURCE:** Medicare Advantage Organizations (MAOs)

VALUES: —

**COMMENT:** The "thru" date on the claim may not always represent the last date of services, particularly for Home

Health or Hospice care. To obtain the date corresponding with the cessation of services (or discharge

date) use the discharge date from the encounter (variable called BENE DSCHRG DT).

For Part B non-institutional (Carrier and DME) services, this variable corresponds with the latest of any of the line-item level dates (i.e., in the Line File, it is the last CLM\_THRU\_DT for any line on the claim).

It is almost always the same as the CLM\_FROM\_DT; exception is for DME claims — where some

services are billed in advance.

On October 1, 2015 the conversion from the 9th version of the International Classification of Diseases (ICD-9-CM) to version 10 (ICD-10-CM) occurred. ICD-10 has more than 70,000 unique diagnosis codes compared to approximately 14,000 ICD-9 codes, which allows for more detail surrounding diagnoses.

The diagnosis version code applies to all diagnoses on the claim (i.e., diagnoses appear in variables ICD\_DGNS\_CDX).

This field is not present in the institutional claims (inpatient, skilled nursing, home health) since the cutover occurred exactly on October 1, 2015. Although this cutover date applies to carrier/DME claims, there are some instances where a billing date could straddle the cutoff date (e.g., DME ordered vs. received dates), therefore we include this field to enable verification as to which codes are used.

**COMMENT:** The ICD-9-CM codes were named as the HIPPA standard code set for inpatient hospital procedures.

For inpatient and skilled nursing claims, health care providers use the International Classification of Diseases version 9 (ICD-9) procedure codes to describe the service provided. Starting in October 2015,

the ICD-10 Procedure Coding System (ICD-10-PCS), is used.

HCPCS/CPT codes were named as the standard code set for physician services and other health care

services.
